

**IN THE SPECIFICATION:**

Please amend paragraph 0017 as follows:

Figure 1 illustrates an insulating holder [[11]] of a first preferred embodiment, which includes a lower cylindrical enclosure 13 and an upper cylindrical enclosure 15. Both the upper enclosure 15 and the lower enclosure 13 are preferably formed out of a relatively rigid insulating material such as, for example, Styrofoam, which provides structural integrity as well as insulating properties. Both the upper enclosure 15 and lower enclosure 13 are shown installed about a bottle 17 (in phantom). The bottle 17 is generally formed to have a side and a neck, which neck generally increases in diameter from the top capped part to a shoulder area (not shown). The general construction of the upper and lower enclosures 15 and 13, respectively, are more completely described in applicant's United States Patents No. 5,390,804 and 6,554,155, the disclosures of which are both incorporated herein by reference.
